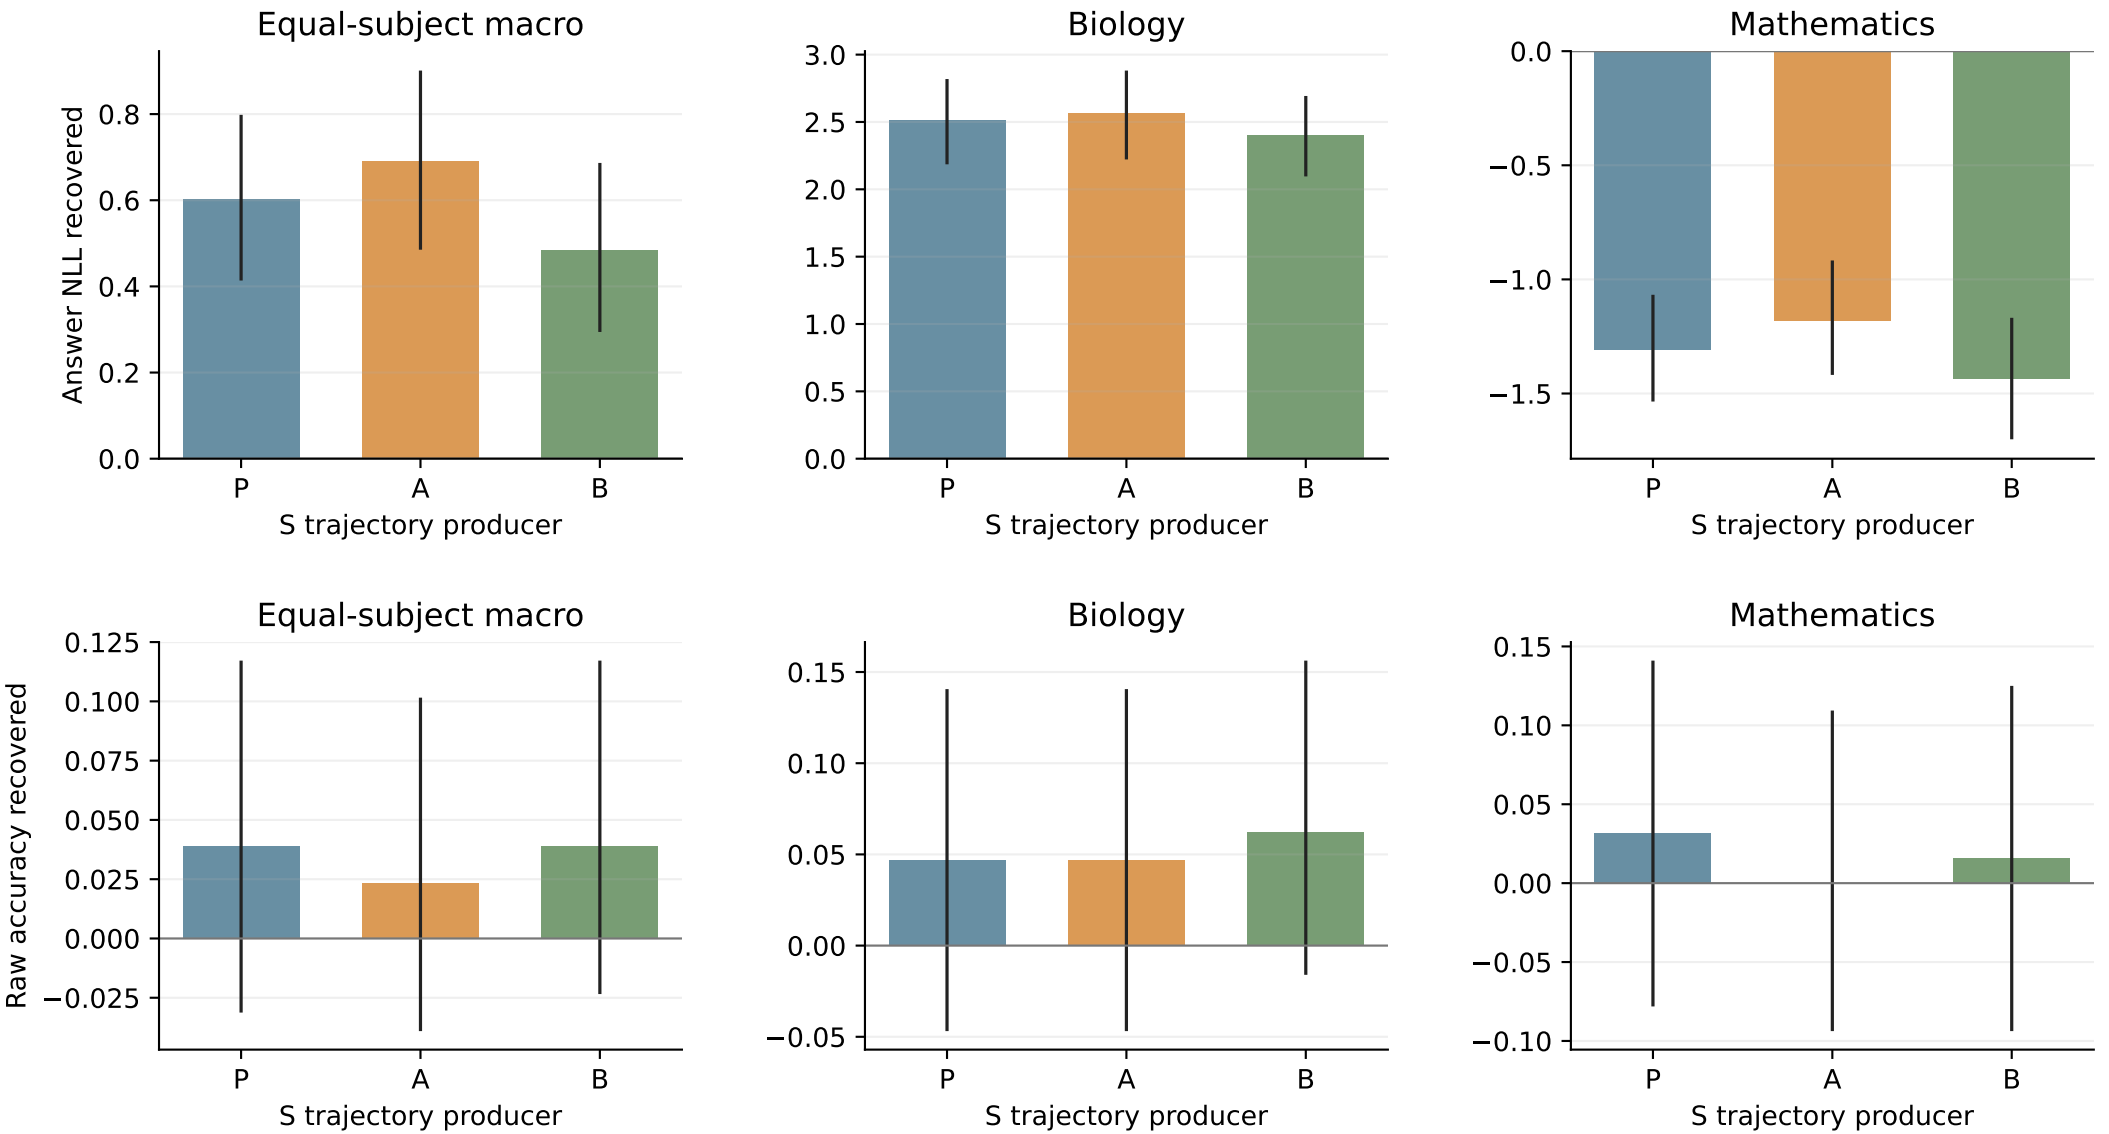
Retaining computed S trajectories after online R removal



The same suite of 16 shared experts S_P and P dense/gate parameters throughout. Each fixed-producer comparison replays the same S trajectory.
128 fixed questions; paired question 95% CIs within two fixed subjects. Replay retains producer R history.
Signals were computed with R present; fixed-signal R-zero NLL remains 7.4–7.6 versus complete NLL near 2.1.
This is not an R-free model or intrinsic S-only ability; the two subjects have opposite loss responses.
