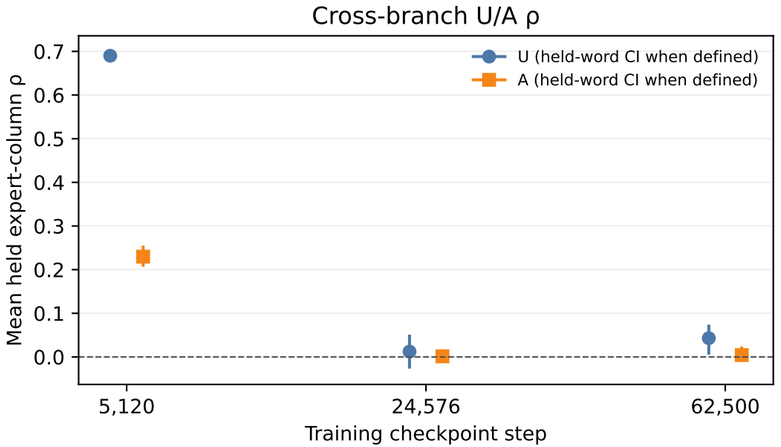
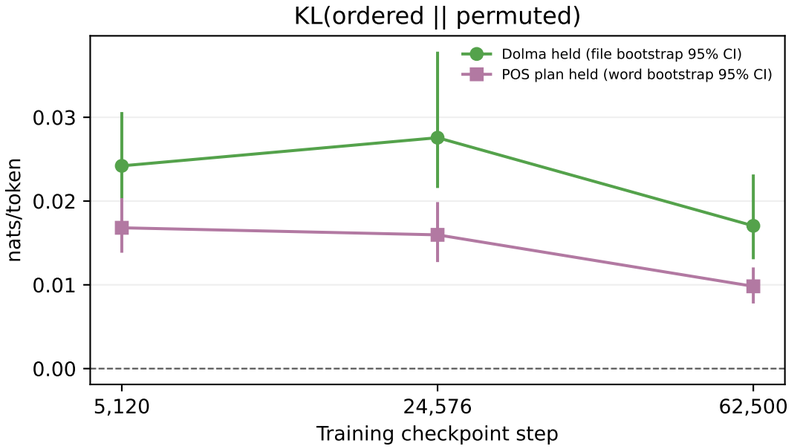
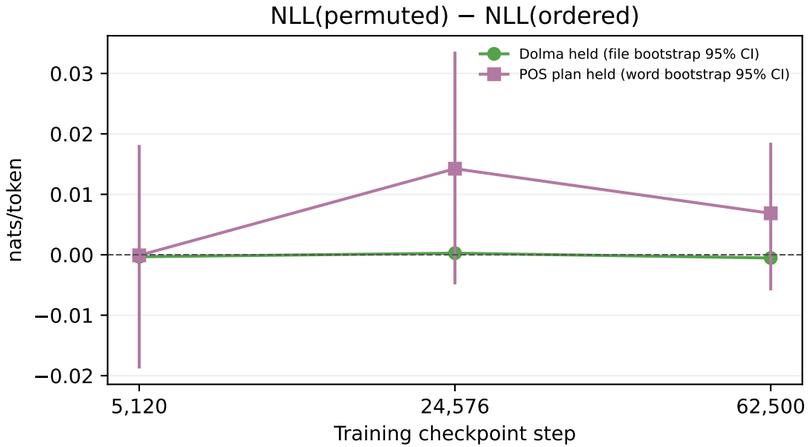
E131 — Transient order pulse and common-suffix readout







Population and precision

Dolma: BF16 logits -> FP32 logsoftmax
32 files; file-bootstrap CI

POS plan held: BF16 backbone -> selected last hidden FP32 -> actual FP32 lm_head/logsoftmax
512 items / 48 words; word-bootstrap CI

One step-4096 parent; a short equal-exposure order pulse is followed by shared training. U/A points are means over 64 expert columns; CIs bootstrap held-word clusters (the points are not word-wise correlations). Error bars are file- or word-level CIs, not seed CIs. This plot does not assert cross-run function equivalence.
