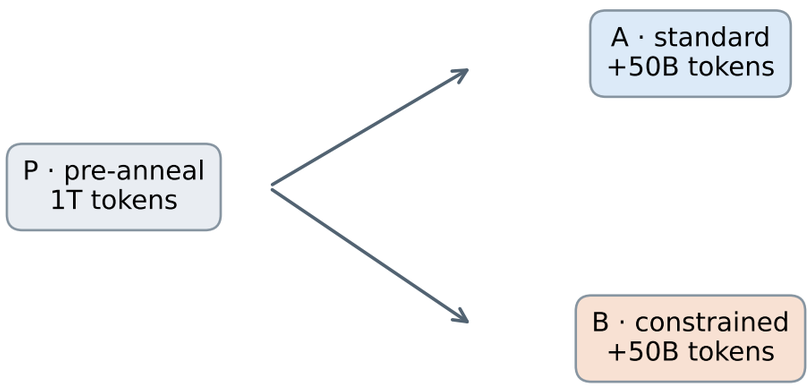
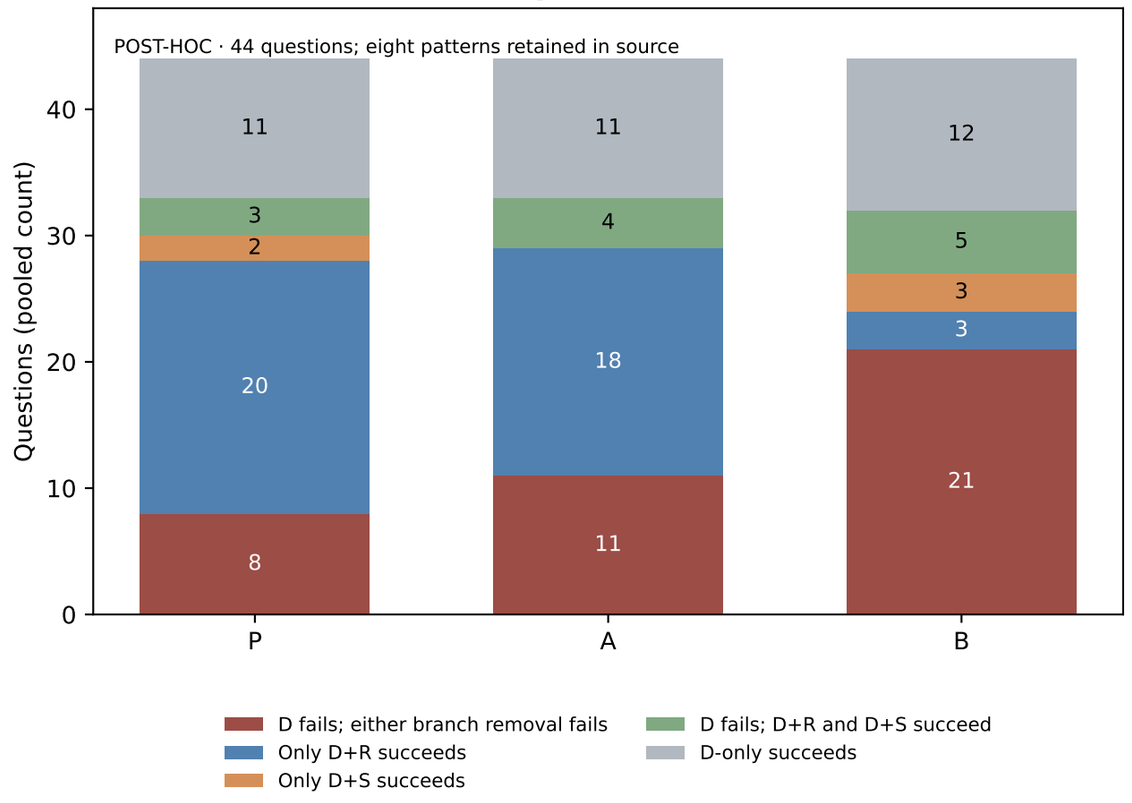
Mature MoE: computational dependence and functional reuse

A One declared mature lineage

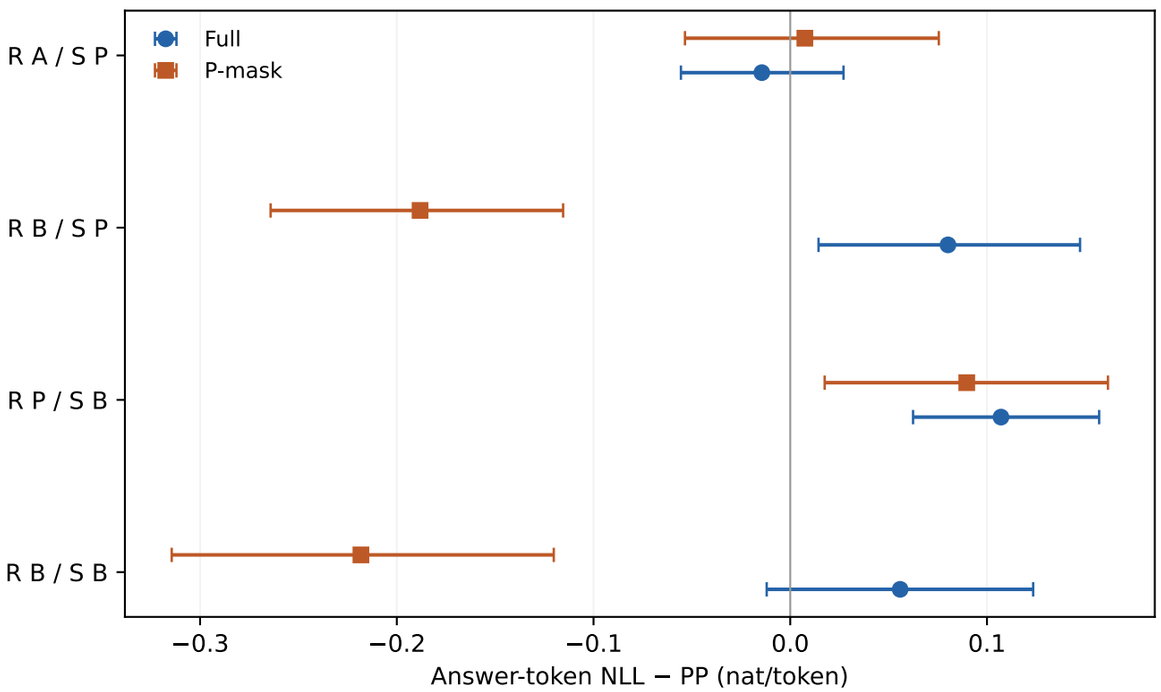


Fixed 128-question RC accuracy (P / A / B): 37.50% / 41.41% / 39.06%
Declared public lineage; original batch/optimizer byte chain not verified.

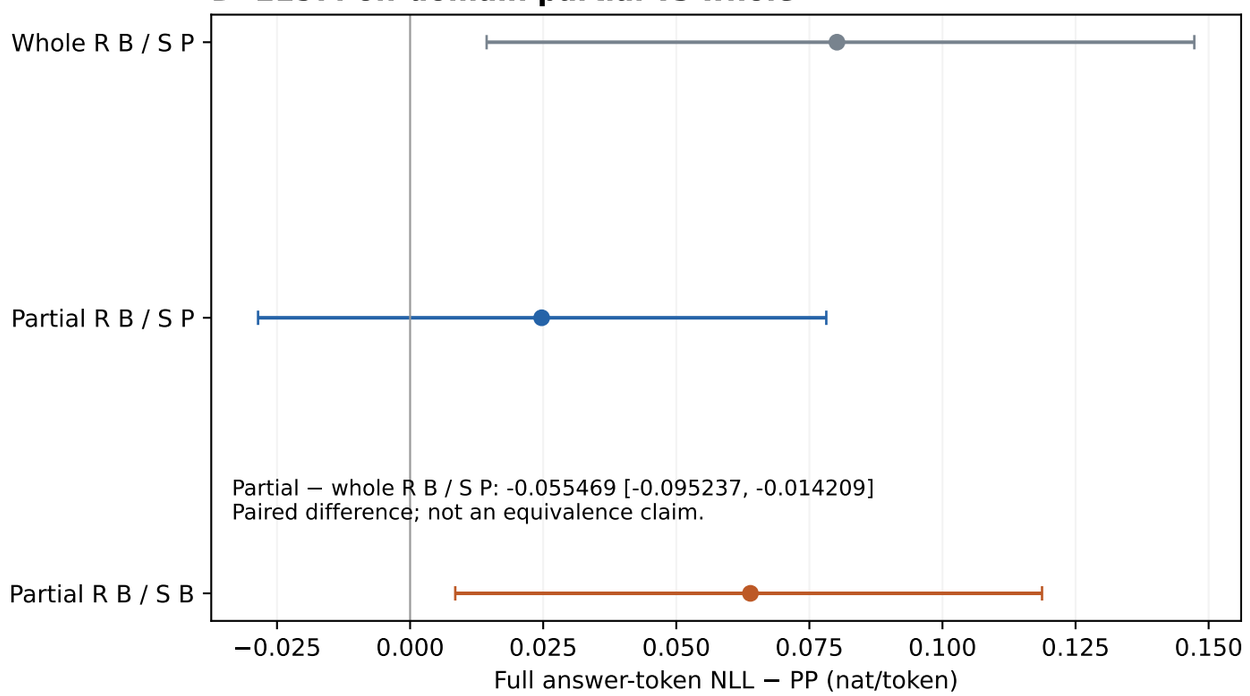
B Native-common-success patterns



C E156: fixed full and P-mask transfer



D E157: on-domain partial vs whole



One lineage, two fixed subjects. Error bars: paired question bootstrap; fixed inputs, not training-seed variation.
Raw accuracy did not improve in the reported E157 reuse comparison. Active top-k remains 7 routed + 1 shared; 32 is an eligibility budget.
E156 masked results are inherited references, not new E157 measurements. Panels compare shared successes, function donors and receiver context.
