# E85 · Actual transfers, claims, and changed requests

Action differences, not cooperation quality

9 source graphs · 18 source histories · 2 fixed seeds; paired differences before equal graph averaging.
Pointwise 95% graph-bootstrap intervals (4,000 draws). First four rows: full responsive continuation, initial-treatment ITT.
Last row: new Give X only after the identical first NPC response and changed request (turns ≥ 2).

X is the player-transferred item; Y is the NPC-held item sought by the player. Neither receipt nor Give certifies the full role purpose.
