Same correct answers, paired changes in computational dependence
44 fixed questions answered correctly by all three native models; each column is the same question
Biology: 36 questions
Math: 8
Parent P
Standard A
Constrained B
0: D fails; removing either R or S fails
1: D fails; only D+S preserves success
2: D fails; only D+R preserves success
3: D fails; D+R and D+S each preserve success
4: D works; D+R and D+S both fail
5: D works; only D+S preserves success
6: D works; only D+R preserves success
7: D, D+R and D+S all preserve success
POST-HOC; R/S are removed globally. Colors describe success under interventions, not semantic knowledge ownership.
